South Sea 4175 — NCS S 5020-R90B — WR 4175

Graphite Pearl 4165 — NCS S 6500-N — WR 4165

KEY FEATURES

Features Polysafe™ PUR for optimum appearance retention and life cycle maintenance cost savings of up to 60%.

Incorporates aluminium oxide and coloured quartz particles to improve traction and safety underfoot.

Slip resistance is assured for the guaranteed life of the product.
≥36 (Pendulum wet test - 4S Rubber/Slider 96).

Conforms to EN 13845 50,000 cycles abrasion test and ASTM F1303.

KEY FEATURES

Luxury vinyl plank and tile collection featuring creative and authentic wood and stone designs.

Accurate timber variation, grain and knots are sympathetically represented.

Polyurethane reinforcement provides an excellent foundation for an ongoing cleaning regime, leading to maintenance cost savings.

Indoor Air Comfort GOLD - Eurofins certified product.

Conforms to ASTM F1700.

100% RECYCLABLE
40% RECYCLED MATERIAL

® Refer to BRE Global ratings on www.greenbooklive.com

SPECIFICATIONS

The R values shown denote a ramp test result, which is an ex-factory measure of slip resistance.
For safety flooring with sustainable wet slip resistance, refer to the Expona Control PUR or Polysafe ranges.

GAUGE: 2.0mm, wear layer 0.3mm
AVAILABILITY: Tile & Plank: sizes as shown

This product is a highly realistic replication of natural materials. Hence, on many designs, natural variations in texture and colour will be present.
Please note: due to limitations of colour printing, actual samples should be seen before colour selection is made.

KEY FEATURES

Wall and ceiling cladding sheet featuring a subtle marbleised decoration.

Polyurethane surface treatment provides benefits in terms of hygiene and ease of maintenance.

Designed to be welded to Polyflor floorcoverings, to provide a floor-to-wall surface that provides an excellent barrier to dirt and infection.

Ideal for wet and hygiene-critical areas

† Polyflor ROF flooring for explosive handling areas, no protection from short circuit on a 240/250 volt mains. All SD results require minimum 40% R.H.

✚ All Polyflor commercial sheet vinyl ranges provide a continuous, impervious and hygienic flooring solution which can be confidently cleaned in accordance with recommended maintenance procedures and approved maintenance products. The implementation of an effective cleaning regime is the most important defence against infection.

Sustainability Credentials

The data presented is correct at the time of printing. For latest information, please check our website at www.polyflor.com

Sustainability

Polyflor vinyl flooring provides a high performance, cost effective, low maintenance, long-life solution combined with excellent environmental credentials.

Life Cycle Analysis (LCA) is an important way to assess a product's entire environmental impact from start to finish. In third party LCAs including EN 15804 EPD, BRE Global, Ecospecifier and BASTA, Polyflor products perform excellently. Therefore specifying our flooring can help maximise points on a building's environmental assessment including BREEAM, Green Star and LEED®. LCAs are pivotal in providing transparent information and helping decision makers choose the most sustainable product available.

Materials
Our materials are responsibly sourced predominantly through local suppliers who are ISO 14001 certificated like Polyflor, or have a robust EMS. Vinyl is made up of 57% salt (chlorine) and 43% oil (ethylene). Polyflor's vinyl is made up mostly from natural and sustainable materials, this can be up to 85% - salt is one of the world's most abundant natural resources and calcium carbonate is used as filler. We do not use formaldehyde, lead, mercury, cadmium and hexavalent chromium - product is REACH compliant. We do not use non-compliant plasticisers and use a range of ortho-phthalate and non phthalate options.

Manufacturing & Logistics
Energy required per m² of material produced has fallen by 46% since 2000 and carbon emissions have decreased by 18,426 tonnes, due to ambitious ISO 14001 targets. It takes less energy to produce our vinyl than other plastics and at least 15% less energy than linoleum and 50% less than ceramics. Also with a typical 20-25 year life, fewer replacements are required.

Water use minimisation is important and on site rainwater is stored and used, saving a valuable, natural resource. 96% of the water used is recycled water, with just 4% coming from mains supply. Despite increasing sales volumes, wet and dry waste has been significantly reduced with the majority of waste we accrue, being recycled.

Polyflor efficiently distributes product globally through the transportation of full, bulk loads. Polyflor's fleet of HGVs are now more aerodynamic with euro 5 compliant engines for reduced fuel consumption and CO² emissions. Driving efficiencies and miles per gallon have also been improved, further reducing environmental impact. Additionally, vinyl flooring is much lighter than other flooring materials, which produces a positive outcome in transit, reducing fuel consumption.

Performance & Maintenance
Polyflor vinyl flooring is 100% fit for purpose, due to choice, use area, performance and durability without compromising on the environment. The in-use phase of the resilient flooring life-cycle accounts for at least 80% of its environmental impact. Therefore all of our ranges are designed with low maintenance features, whereby energy intensive cleaning is not required. PU, PUR and Polysafe PUR ranges are the easiest to clean, ensuring that use of water (55% less), polish (Polyflor PUR is polish free for life), strippers and chemical cleansers are significantly reduced. Specifiers prefer Polyflor products for their easy maintenance.

VOC emissions on our product ranges are all below industry standards with no negative contribution to indoor air quality. They have passed the most stringent, independent VOC emissions tests including AgBB/DiBT, Eurofins Indoor Air Comfort Gold, FloorScore® and GBCA/NZGBC Green Star IEQ-VOC.

End of Life
Vinyl is 100% recyclable and unlike many other materials, it can be recycled repeatedly without weakening or losing performance. Recycled content can be up to 40%, but on average is around 25% across many high volume ranges.

Polyflor is the largest vinyl flooring manufacturer in the UK, producing a wide range of products. In 2013, 9,570 tonnes of post production waste was recycled. Encouraging reclaim of post consumer waste is equally important to Polyflor and in 2013, 800 tonnes of vinyl waste was recycled back into new product. If it is not feasible to go back into new flooring due to contamination, vinyl is recycled into inferior quality PVC products, such as traffic cones.

BES 6001
"Responsible Sourcing of Construction Products is demonstrated through an ethos of supply chain management and product stewardship and encompasses social, economic and environmental dimensions."

BRE Global

All Polyflor production sites have been audited for BES 6001 (a complete sustainability standard from the BRE) achieving 'very good' certification. BES 6001 is a framework standard for the responsible sourcing of construction products and sets out requirements under three main headings:
**Organisational Management**
Supply Chain Management
Environmental & Social Issues

To meet this standard and achieve a 'very good' rating, Polyflor has satisfied the compulsory sections as well as conforming to higher levels of compliance through seventeen principles of responsible sourcing. The principles include:
- Ethics
- Legal Compliance
- Management Systems
- Supply Chain Management
- Stakeholder Engagement
- Complaints & Prosecutions
- Health & Safety
- Fundamental Rights at Work
- Climate Change & Energy
- Resource Use
- Site Stewardship
- Water
- Waste Management
- Transport Impacts
- Employment & Skills
- Local Communities
- Contribution to the Built Environment

A comprehensive report on Polyflor's sustainability can be found at **www.polyflor.com/environment**.
